

DNA Sampling Kits

Effortless Preservation and Stabilisation

Proper preservation ensures that the DNA remains intact and unaltered, which is essential for accurate diagnosis. Degraded DNA can lead to incorrect results and misinterpretations.

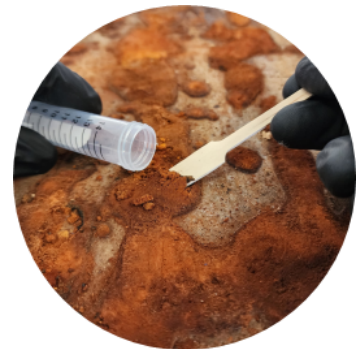

Our TECHT DNA sampling kits ensure your samples are preserved and stabilised right at the time of collection, eliminating the need for cold-chain or dry-ice. Transport your samples at ambient temperature for up to 30 days with complete peace of mind.

Key features:

- ✓ Fluids and solid samples
- ✓ Video tutorials
- ✓ Quick start protocols
- ✓ Reliable
- ✓ Convenient
- ✓ Affordable

Prefer a hands-off approach?

Our professional staff can attend your site to handle the entire sample collection and analysis process for you. From start to finish, we ensure a seamless and efficient experience.
